Tilburg University has the intention to realise a renewal of its building stock in the coming years. The first project encompasses the new development of an Education- and Self-Study Centre (ESSC) that will be taken into use in 2017. After the realisation of the ESSC the new development of a restaurant building with study associations is envisioned together with the development of a multi-tenant business building for startup companies (a so-called 'incubator'). Alongside the architectural renewal of the building stock of Tilburg University the Masterplan also envi-

sions an enhancement of the quality of the landscaping on campus scale. The aim of the Masterplan is bilateral: to achieve a qualitative intervention of all envisioned building schemes north of the existing 'esplanade' and to provide Tilburg University with a long-term vision on the development of the campus into a coherent whole. To achieve this goal the Masterplan serves as an underlayer for future zoning plan alterations: the necessary alterations to realise the ESSC will be supported by the rules and guidelines as formulated in the Masterplan.
